ABOUT OUR DELPHINIUMS

Dowdeswell's New Millennium Delphiniums have become accepted as the most advanced garden delphiniums available from seed today. Terry Dowdeswell has been breeding his New Millennium strain in New Zealand for over 25 years and has produced a very consistent, reliable and vigorous range of colours and forms in the thirteen varieties currently available. We are proud to offer these plants in the knowledge that they are the best available anywhere in the world – and they were born in New Zealand.

New Millennium Delphiniums grow between 1 and 1.8 metres tall, according to variety. The young plants come in 9cm pots with attractive, large colour labels and are prefer a sunny position in well drained garden soils – very similar conditions to roses in fact – and they look great planted among them.

ABOUT "SPOTLIGHT" HOLLYHOCKS

"Spotlight" series hollyhocks were introduced by Jelitto Seeds in 2010 after an 18 year breeding programme. General Manager, Georg Uebelhart felt that the development of consistent strains of Althea rosea in straight colours would be worth the effort. It was. The result is consistent single flowers of the darkest black-purple (Black Knight), pure white with a yellow eye (Polarstar),, red colours (Mars Magic) and light yellow (Sunshine). These plants like well drained soils and will enjoy moist to relatively dry conditions. The Spotlight series of hollyhocks combines beautifully with our New Millennium Delphinium series by providing tall flowering spires in a contrasting range of colours
